Web Accessibility Recognition Scheme Confers Gold Honours on DYXnet for Website Design That Aids Users Challenged by Disabilities

"We constantly strive to provide users with a pleasant search experience, especially less fortunate members of society"

HONG KONG, April 19, 2016 /PRNewswire/ -- DYXnet Group, Greater

China's leading carrier-neutral network service provider, has struck gold in the website world by winning the coveted Web Accessibility Recognition Scheme - Gold Award.

Organisations of all sizes have been vying for this prestigious annual award since it was first established in 2012 by the Office of the Government Chief Information Officer in partnership with the Equal Opportunities Commission.

The scheme recognises and rewards industry players that adopt thoughtful website designs to remove barriers to members of society challenged by disabilities such as impaired eyesight, dyslexia or epilepsy.

Gold honours were bestowed on DYXnet Group after it was singled out from more than 239 contenders in the Website Stream category of the award scheme. The accolade was received on behalf of the company by Floria Chan, Group Director of Marketing & Corporate Communications, at a special presentation Ceremony held today.

Lap Man, Founder & CEO of DYXnet Group, said: "We are absolutely delighted to receive this award, especially after winning silver status in the scheme last year. In fact, I'm very proud of my team because they worked tirelessly to meet 24 judging criteria for the Gold Award, whereas Silver only involves 13 criteria."

He added: "Hong Kong is home to some 330,000 companies, and if each could take a small step for society, it would amount to a giant leap in helping so many! DYXnet Group operates on a day-to-day basis with a keen sense of community spirit, so we constantly look for new ways of providing users with a pleasant search experience, especially those members of society not so fortunate as ourselves."

About DYXnet Group

Established in 1999, DYXnet Group is the leading carrier-neutral network service provider in Greater China offering Multiprotocol Label Switching Virtual Private Network (MPLS VPN), internet access, data centre, unified communication and network security solutions to enterprise clients with provisioning capability in many cities in Greater China and the wider Asia Pacific region. In August 2014, our Virtual Private Network (VPN) business unit was acquired by 21Vianet Group, Inc. (NASDAQ: VNET) ("21Vianet"), China's largest carrier-neutral internet data center services provider. Starting from 2016, DYXnet and 21Vianet's Content Centric Internet Backbone (CCIB) units have been successfully merged. DYXnet Group serves 700 cities in mainland China, Hong Kong, Taiwan, Singapore and Vietnam, including more than 10,000 MPLS VPN clients' sites, and hosts more than 8,600 clients' servers. It was the first batch ICT service providers in Greater China to obtain ISO 9001:2008; ISO/IEC 20000:2011; ISO/IEC 27001:2013 international certifications for information security, international IT service management as well as quality control respectively. These qualifications demonstrate DYXnet's commitment to offering premium information and communication technology with outstanding customer service.
