Backup as a Service (BaaS)
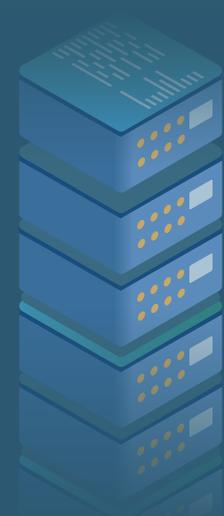

Prepare for a disaster including natural one, power outages and cyberattacks

Convenience

Safety

Ease of Recovery

Affordability

There is a critical need for simplicity and efficiency when backing up and recovering offsite, public cloud and Microsoft 365 data given the increased threat to data security, data deletion risks, and rapidly evolving compliance requirements. With direct integration and 100% compatibility with Veeam's industry-leading Backup & Replication software, you can implement your Cloud Native Workloads, On-Premise, and Offsite Backup strategies by DYXnet Cloud Platforms.
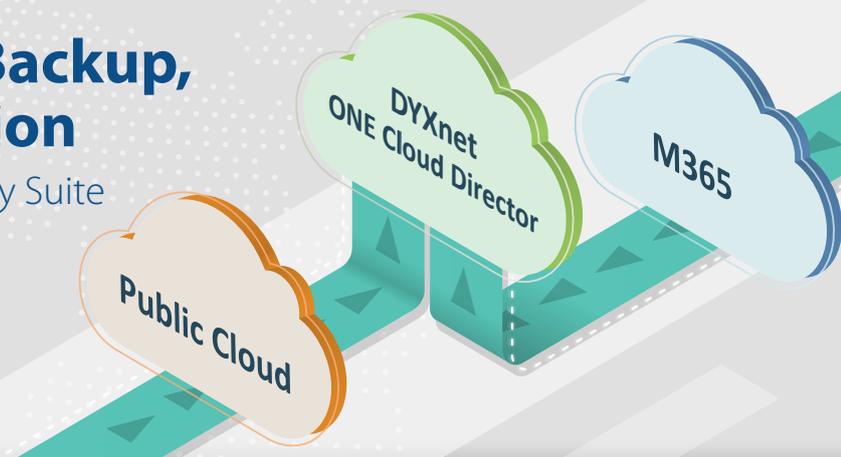

Why DYXnet for BaaS?

- Backup and intelligent recovery of production workloads residing in DYXnet T3 DC
- Reliable cloud repositories as backup storage
- DC and clusters in HK and major APAC cities including Beijing, Shanghai, Shenzhen, Dongguan, Taipei, Singapore, Tokyo etc
- Backbone network resilience with backbone trunks provided by 2 or more telecom operators
- Experienced management for your tenant accounts, license and quota
- Flexible maintenance platform hardware plan and lifecycle

Protect Your Data with Efficient and Reliable Backup, Recovery and Replication

on DYXnet Cloud and Veeam Availability Suite

DYXnet ONE Cloud Director

M365

Public Cloud

Public Cloud Workload

Including physical server, workstation, VM, AWS and AZURE Workload

- Feasible backup function with mutli-workload
